

Basic Laboratory Equipment (Glassware and Hardware)

Glassware	Name	Use
	beaker	Holding liquids <ul style="list-style-type: none">• may be graduated (sometimes in two directions)• has a white spot for labeling• various sizes including 50, 150, 250, 450, 650, and 1000 mL
	Erlenmeyer flask	Holding liquids <ul style="list-style-type: none">• shape avoids loss due to splashing• used for titration• common sizes include 125, 250, and 500 mL
	Florence flask	Heating liquids <ul style="list-style-type: none">• shape allows even distribution of heat while boiling• never graduated• common sizes include 250 and 500 mL
	test tubes	Holding liquids or solids <ul style="list-style-type: none">• can be heated directly or in a water bath• may be used to mix small quantities of chemicals• large variety of sizes
	fluted funnel	Funneling liquids <ul style="list-style-type: none">• useful for pouring liquids through small openings• can contain filter paper for separating solids from suspensions by filtration
	evaporating dish	Evaporating solvent <ul style="list-style-type: none">• evaporation from a solution• can be used to dry a damp product• ceramic material allows direct heat to high temperatures
	watch glass	Holding or covering <ul style="list-style-type: none">• useful for holding a sample of chemical• may cover a beaker or flask to prevent evaporation• holds chemicals while drying
	crucible	Heating to high temperatures <ul style="list-style-type: none">• heating covered or partially covered samples• ceramic material may be directly heated until red hot

	<p>pipe stem triangle</p>	<p>Providing a base to hold a crucible</p> <ul style="list-style-type: none"> • sits atop a wrought-iron ring • stems are made of ceramic material
	<p>graduated cylinder</p>	<p>Measuring volumes of liquids</p> <ul style="list-style-type: none"> • sizes vary • commonly 10, 25, 50, 100, and 250 mL
	<p>burette</p>	<p>Measuring volumes of liquids</p> <ul style="list-style-type: none"> • delivers various volumes through a valve called a stop cock • more precise (exact) than the graduated cylinder
	<p>pipette</p>	<p>Measuring volumes of liquids</p> <ul style="list-style-type: none"> • may be graduated • may be volumetric (designed to deliver one specific volume) • liquid is drawn up with a pipette bulb or suction device
	<p>thermometer</p>	<p>Measuring temperatures</p> <ul style="list-style-type: none"> • bulb should be submerged in the fluid being measured • temperature ranges vary • most contain dyed alcohol • more precise thermometers contain mercury • commonly measure temperature in degrees Celsius

Hardware	Name	Use
	ring stand	Providing a post to attach <ul style="list-style-type: none"> ring clamps, burette clamps, extension clamps, etc. also called a utility stand
	ring clamp	Attaching to a ring stand <ul style="list-style-type: none"> supports a ceramic pad, a pipe stem triangle, or an evaporating dish may surround a beaker as a safety ring
	burette clamp	Attaching to a ring stand <ul style="list-style-type: none"> holds a burette may hold a test tube in a stationary position may support the neck of a flask
	flint striker	Lighting a Bunsen burner <ul style="list-style-type: none"> provides a spark by moving a flint across a file
	bunsen burner	Providing heat <ul style="list-style-type: none"> adjusts flame temperature by addition of air through the barrel adjusts flame height by turning the regulator valve
	test tube holder	Holding hot test tubes <ul style="list-style-type: none"> used for heating test tubes over flame used for removing test tubes from water baths
	beaker tongs	Lifting hot beakers <ul style="list-style-type: none"> rubber cover allows tongs to firmly grasp and move beakers of all sizes
	crucible tongs	Holding hot crucibles <ul style="list-style-type: none"> may remove or adjust crucible lid holds hot evaporating dishes NOT designed for lifting beakers or test tubes
	ceramic pad	Providing a base to hold glassware <ul style="list-style-type: none"> sits atop a wrought-iron ring provides a flat surface for beakers or flasks sometimes called a wire gauze
	scoopula	Moving samples of solids <ul style="list-style-type: none"> sometimes called a spatula should NOT be used as a stirring rod (stirring rods should be glass)
